*Time Wise Repair® Revealing
Radiance® Facial Peel*

Harness the power of glycolic acid to eliminate dead skin cells and enhance skin's own natural renewal process.

*Mary Kay Clinical Solutions®
PHA + AHA Resurfacer*

Accelerate surface skin renewal and gently dissolve dead skin cells with poly-hydroxy acid, alpha-hydroxy acid and skin-replenishing glycerin.

+ As skin ages, cellular turnover begins to slow down. This means that dead skin cells can linger longer, which can lead to the appearance of uneven skin texture and visible signs of aging. While both of these products are wonderful chemical exfoliants that accelerate skin cell turnover – leaving complexions luminous with renewed radiance – there are some noteworthy differences between these two products. Use this chart to guide you to the skin-enhancing solution that's best for your overall skin care health.

Contains **Poly-Hydroxy Acid (PHA)**, which works exclusively on the surface of skin to deliver gentle yet effective exfoliation.

Contains **Glycerin**, which is a widely used humectant due to its ability to attract water to itself and help boost moisture levels on the top layers of the skin.

Contains **Alpha-Hydroxy Acid (AHA)**, also known as Glycolic Acid, which removes dead skin cells from the top surface layers of the skin to accelerate deeper exfoliation.

Contains **Marine Extract**, which is shown to have hydrating benefits.

Features a leave-on formula.

Features a rinse-off formula.

Chemical exfoliator

Apply 2 or 3 times per week in the evenings.

Is not compatible with *Mary Kay Clinical Solutions® Retinol 0.5* during the retinization process.
